

The agricultural sector is one of the oldest in the world but currently also **one of the most innovative and pioneering**. Bosch Beton is the European market leader for prefab retaining walls and this year presents two major innovations for your dairy farm.

**NEW**

## THE TWO BIGGEST INNOVATIONS FOR YOUR FARM

### BOSCH BETON EFFLUENT CHANNEL

The effluent channel is the most exciting innovation of the two. This system enables the farmer to separate water and silage effluent, simply and easily. Thanks to the clear colour coding the flushing status is visible at a glance. After ten successful pilot projects the effluent channel is now being sold in large quantities. There has been a very enthusiastic response from the farmers. According to knowledge and consultancy agency Broos Water, the Bosch Beton Effluent channel provides 'a sustainable and robust solution for separating clean and dirty water in feed storage'. The Vallei and Veluwe Water Board considers the Bosch Beton effluent channel to be 'a good system that functions effectively and efficiently if used properly'. The simple system is the most practical solution currently available in your clamp silo for efficiently dealing with farmyard run-off.

**Mr Hartman from Toldijk:** 'I liked this new effluent channel. It's simple and solid, has a nice smooth finish and is a sustainable solution for the future. Because it is a very simple system I think it offers a really workable solution for every farmer.'

Doubly reinforced, 20 ton axle load

### BOSCH BETON SLABS

Concrete slab used as a hard surfacing in a farmyard or as a foundation for a clamp silo is nothing new. The new Bosch Beton Slab certainly deserves a mention however, since these slabs are doubly reinforced, making them suitable for supporting an axle load as high as 20 tonnes. By way of a comparison: concrete slabs are usually singly reinforced to bear an axle load of 15 tonnes. The Bosch Beton Slab is, therefore, the perfect match for farm vehicles which are becoming heavier all the time. Furthermore, the slabs have a smooth finish and display high wear resistance and dimensional stability. With this product you are choosing the same concrete quality as the new generation of Bosch Beton clamp silo walls.
